

CYCLES

Auto-replenishment Solution

WHY IT MATTERS?

IMPROVE CUSTOMER SERVICE

Delight your customers.

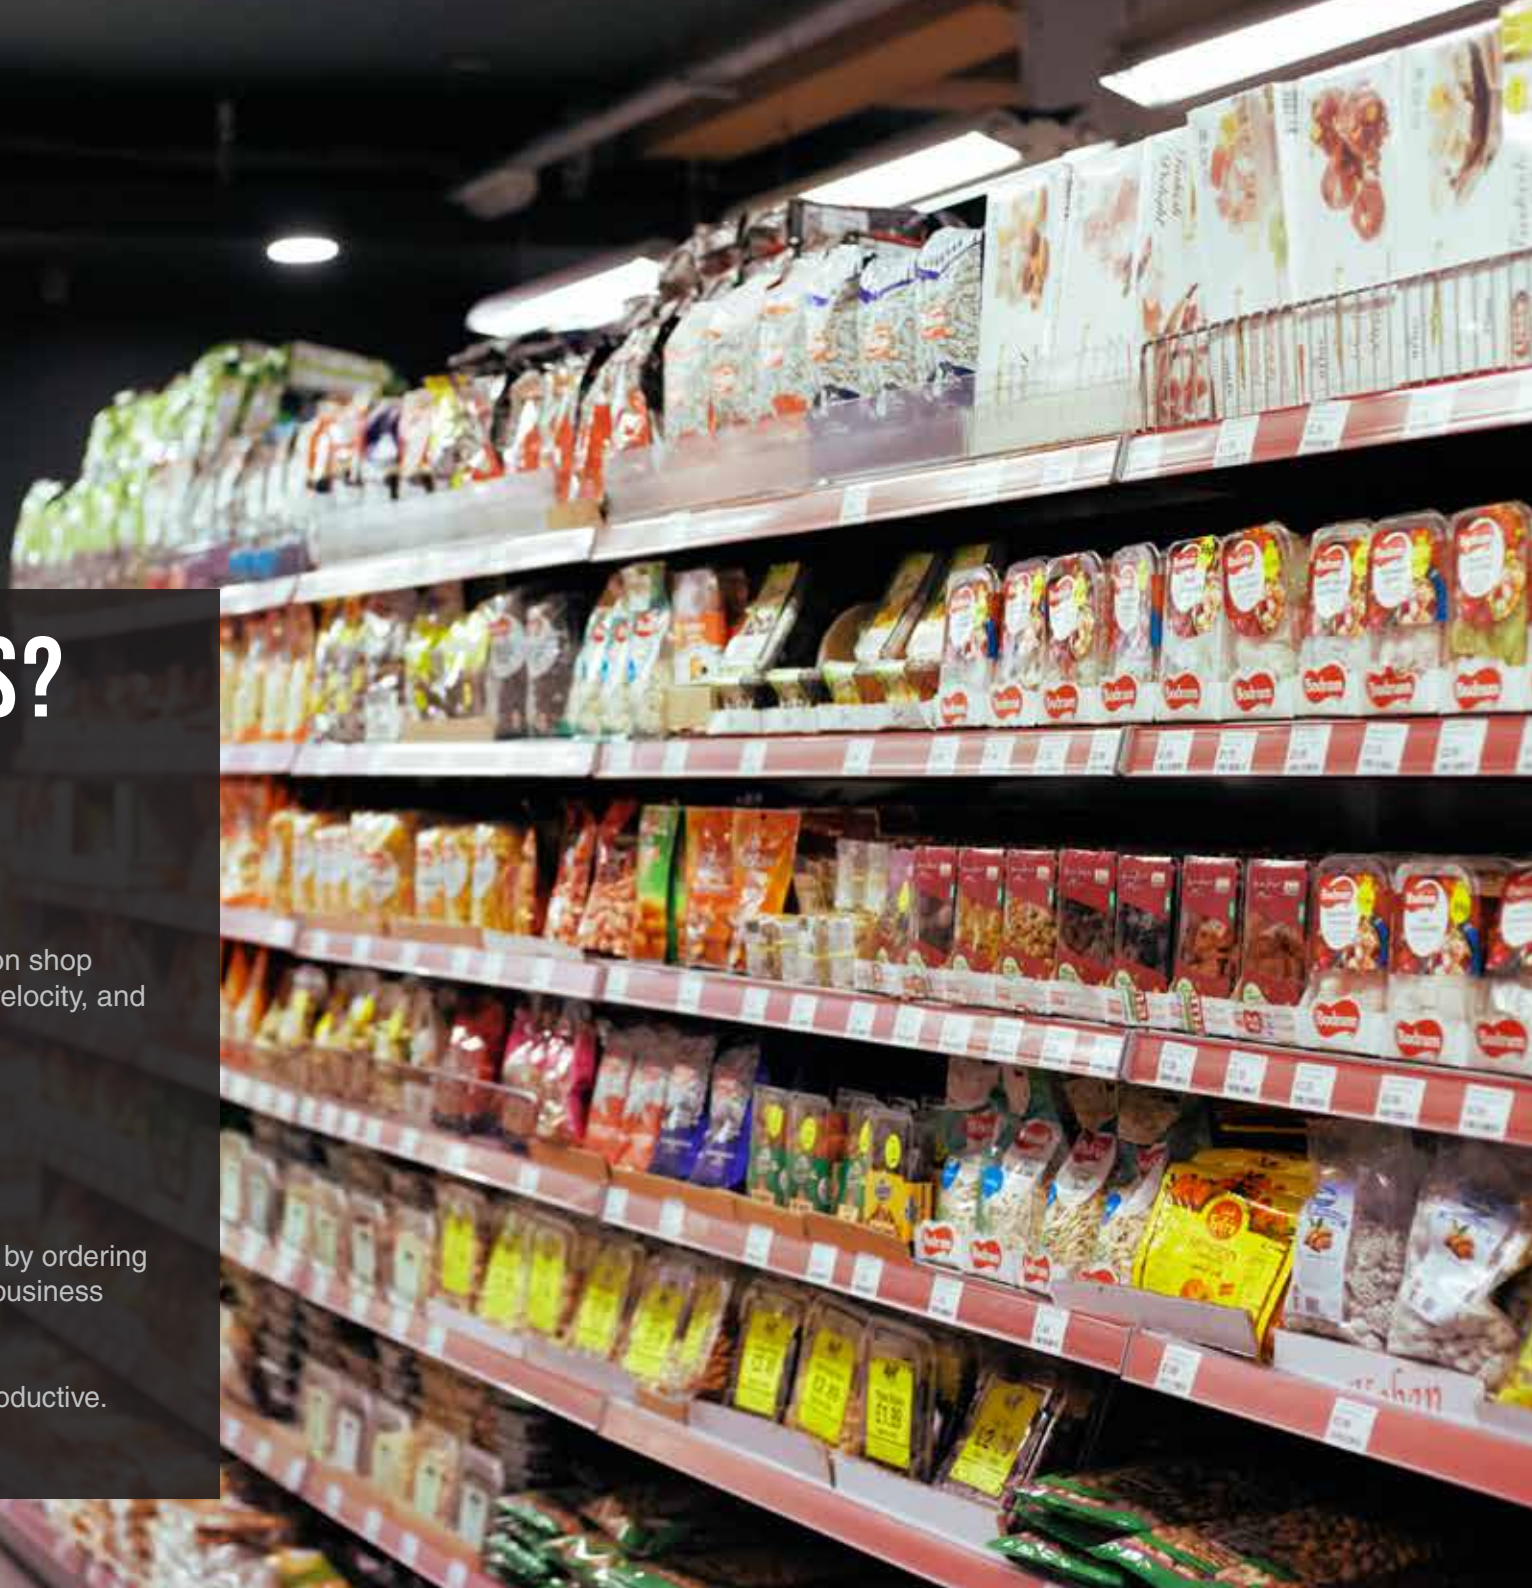

CYCLES ensures stocks are available on shop shelves every time regardless of scale, sales velocity, and replenishment method.

INCREASE PROFITABILITY

Get more value on your inventory.

CYCLES improves sales turn-over cycle by ordering based on a pre-defined and configurable set of business rules.

Reduce over-stock by keeping your inventory productive. Maintaining availability at lower carrying cost.

FEATURE HIGHLIGHTS

MULTIPLE WAYS TO REVIEW STOCK POSITION

Focus on what matters most. **CYCLES** supports multiple ways to review stock position. Store-items can be reviewed individually or by group. Planners are able to update replenishment parameters easily.

Review of store chain items comprehensively and efficiently compared to labor intensive manual processes.

MANAGE STORE RANGE WITH EASE

Ensure consistent and reliable SKU assignment over a wide variety of store profiles.

CYCLES optimizes inventory by helping assign the right set of items in each store.

INTEGRATED PLANOGRAM

Your shelves are always neat and stocked with centralized space management integrated in **CYCLES**.

Store range and minimum quantity required per item are adjusted automatically based on planogram setup.

DYNAMIC ORDER SCHEDULING

Leverage lower stocks to sales ratio by ordering frequently and in smaller lot sizes. **CYCLES** supports order schedule configuration based on parameters like: manufacturer, vendor, even down to specific item.

Cycles automatically generates suggested order quantities ready for review and release as transfer or purchase order.

BEYOND AVAILABILITY

Mitigate possible out of stock scenarios before they actually happen.

Cycles support sufficiency reporting which accurately identifies items that will run-out in the future due to increase in sales velocity.

EXCEPTION MANAGEMENT & AUDIT TRAIL

CYCLES' accurate inventory and order projection identifies and manages exceptions such as large, unusual manual order.

Exceptions require management override and an audit trail is created. This ensures overstocking due to manual error is avoided.

Save up on time and money needed to analyze each product's demand and status.

Accurately set SKU level and safety stock status based on demand lead times.

Optimize budget and cost of product quantities based on demand and availability from supplier or manufacturer.

Automate forecasts based on everyday consumer demands, as well as seasonal ones.

**People wonder whether the glass
is half empty or half full miss the point.
The glass is refillable.** - Simon Sinek

CYCLES

Auto-replenishment Solution

CUSTOMER SERVICE

Our solutions and implementation methodologies are built on solid industry experience in manufacturing, distribution, and retail combined with extensive capabilities in systems design, deployment, and support.

Our goal is to translate your business requirements to a practical and cost effective solution using proven technologies that are within your reach.
