Delivery Management System

# ***Tracked***

Integrated Delivery Management System.  
Developed by experts and used by industry leaders.

# Tracked

Delivery Management System

In the ever-evolving global trade in transportation, there is a constant pressure to address unprecedented events. Every shipment needs to be on-time as delays convert to idle business.

# FEATURE HIGHLIGHTS

## ROUTE OPTIMIZATION

Save on operating cost through delivery clustering: Merging of multiple orders into one route. Automatically create routes with street level accuracy.

### Dynamic Routing

Improve route selection based on dates of deliveries, location, receiving/dispatch schedules. **Tracked** can also support delivery exemption and special instructions.

### Delivery Cost Simulation

Take control of delivery cost through simulations of required distance, traffic condition, fuel consumption, maintenance index, and other incidental costs.

## LOAD MANAGEMENT

Maximize truck utilization through assignment of loads to current active trucks in real time.

Load assignment can be done by volume and weight.

Leverage **Tracked** scalability to assign either its own fleet or third party providers.

## BILLING FOR DELIVERY

Avoid revenue leakage through a billing mechanism integrated in **Tracked**.

Delivery Transactions can be billed **on-time** and in multiple ways: Truck type, Volume, Weight, Distance, and Unit.

Be on top of ever-evolving customer requirements through Tiered Billing.

## FIRST & LAST MILE DELIVERY

Get closer to your clients and get real-time updates through our last mile delivery mobile application.

Be engaged on day-to-day and end-to-end activities through:

- Booking requests for driver/delivery contractor
- Milestone updates of pick-ups, deliveries, loading, and unloading
- Head office online support
- Proof of delivery sign-on-glass.
